

Healthcare SMB

Information Protection MVP for sellers, architects, and technical specialists

Regulated patient data

Protect referral, lab, claim, and patient/member records with a strong compliance story

Best regulated-data play

Clear outcome narrative and high urgency for compliance

Built-in ready

SSN, member IDs, payment cards, addresses, and medical terms covered by built-in SITs

HOW TO READ THE EXAMPLES

The boxes below show common privacy, clinical, claims, and compliance requirements in Healthcare.

HEALTH PROVIDER

Patient records, referrals, treatment plans, lab results

HEALTH PHARMA

Drug trial data, research records, regulatory submissions, adverse-event reports

HEALTH PAYOR

Claims data, member records, enrollment files, provider contracts

MEDTECH

Device specs, clinical trial data, regulatory filings, service records

HEALTH PROVIDER (ALLIED)

Therapy notes, home-health records, rehabilitation assessments, referral files

Why it matters for Healthcare SMBs

Patient records, referrals, lab results, claims data, member records, and incident files move through Exchange, SharePoint, and OneDrive every day — often across clinics, labs, pharmacies, payors, specialists, and regulators.

This MVP helps teams protect high-value patient and business data in Microsoft 365 within 30 days while keeping day-to-day collaboration moving with trusted external partners.

Partner service motion (30–90 day path)

- ① On demand learning — [Implement Microsoft Purview Information Protection \(Microsoft Learn\)](#)
- ② Deploy — pilot on Exchange, SharePoint, OneDrive · Pilot (Partner-led) · 2–4 weeks
- ③ Govern sharing — trusted external controls · Expansion (Partner-led) · 4–6 weeks
- ④ Managed service — tuning, data loss prevention, audit evidence · Ongoing (Partner-led)

LICENSING: BUSINESS PREMIUM + PURVIEW SUITE ADD-ON

Included in Business Premium (MVP)

- ✓ Manual + default sensitivity labels
- ✓ Built-in sensitive information types
- ✓ Data loss prevention for Exchange, SharePoint, and OneDrive
- ✓ Basic audit (180-day retention)
- ✓ Controlled external sharing

Purview Suite for Business Premium (Phase 2)

- ✓ Auto-labeling policies based on content and context
- ✓ Custom sensitive information types, exact data match, trainable classifiers
- ✓ Advanced data loss prevention for endpoints, Teams, and browsers
- ✓ Audit (Premium) (1-year retention, search)
- ✓ Insider Risk Management and Records Management
- ✓ Data Lifecycle Management
- ✓ Information Barriers
- ✓ Communication Compliance

RECOMMENDED FIRST CUSTOMER MOTION — 30-DAY MVP

1 DISCOVER (WEEK 1)

Map patient-data flows, referral and lab collaboration patterns, payor and vendor sharing, and HR hot spots. 60-minute discovery workshop.

2 DEPLOY (WEEKS 2–3)

Publish the 5-label model. Pilot on Exchange, SharePoint, and OneDrive. Turn on built-in detection, default labels, and controlled external sharing for providers and payors.

3 PROVE (WEEK 4)

Create an evidence pack showing labeled content, remediated risky sharing, and encrypted PHI and HR files. Prepare Phase 2 options such as endpoint coverage, broader data loss prevention, and custom patient or claim identifiers if needed.

EXPECTED OUTCOMES — 30 / 60 / 90 DAY CHECKPOINTS

30 days FOUNDATION (MICROSOFT-DELIVERED ASSETS)

- ✓ 5-label model live on Exchange, SharePoint, and OneDrive
- ✓ Built-in detection covering patient and employee data in files
- ✓ Default labels applied to new content
- ✓ HR/payroll files encrypted with Highly Confidential

60 days CONTROLLED SHARING (Partner service opportunity)

- ✓ External sharing policies for specialists, labs, and payors
- ✓ Clinical records and PHI under watermarking and encryption
- ✓ Vendor and pharmacy partner files on auto-expire links
- ✓ Alerts on patient-data exports leaving the organization

90 days EXPAND (Partner service opportunity)

- ✓ Audit evidence pack for HIPAA and regulatory readiness reviews
- ✓ Custom detection for patient or claim IDs if the data model needs it
- ✓ Endpoint labeling for clinical and remote staff
- ✓ Decision point on Purview Suite for Business Premium for more automation and governance

Talk track for sellers, architects & specialists

“Healthcare SMBs need practical protection for patient records, referrals, claims, and clinical data while still collaborating with specialists, labs, payors, and vendors. Purview lets them start with built-in detection and controlled external sharing now, then add custom patient or claim identifiers only if the data model requires it.”

Discovery questions (Healthcare)

- Where do patient records live — EHR, practice management, billing systems, or file shares?
- Which specialists, labs, payors, or vendors collaborate on referrals, claims, or clinical data?
- Do you share treatment plans, lab results, or imaging with external providers or specialists?
- Are there patient IDs, claim IDs, or member numbers that built-in detection will not catch?
- Who owns compliance, incident, or HR files — and where are they stored?

Handle common objections

“We’re too small for this.” Business Premium already supports a practical 30-day starting point with built-in detection and labeling.

“NDAs already cover us.” NDAs do not stop accidental forwards or overshared links — controlled sharing does.

“Will this slow my users?” Default labels and built-in detection keep the pilot lightweight for end users.

Recommended next step
Run a 60-minute workshop to identify high-value data, external-sharing workflows, and the scope for a 30-day pilot.

TOP DATA TYPES, LABEL FIT, AND EXAMPLE CUSTOMER MOTION

WORKFLOW OR CONTENT	HIGH-VALUE DATA (BUILT-IN / LABEL-LED / CUSTOM)	STARTING LABEL	MVP GUIDANCE
Patient intake, registration & scheduling	Built-in: Patient names, SSN, email, phone, address, member IDs, medical terms	CONFIDENTIAL \ ALL EMPLOYEES	Start with built-in Microsoft detection; protect patient records first.
Referral, lab & specialist collaboration	Label-led: Referral letters, lab orders, specialist reports, imaging requests, inter-provider communications	CONFIDENTIAL \ SPECIFIC PEOPLE	Controlled external sharing for trusted provider workflows; block unmanaged forwards.
Payroll, HR, complaint & incident files	Built-in: Tax IDs, bank details, salary data, employee case information	HIGHLY CONFIDENTIAL \ ALL EMPLOYEES	Strong early proof point for encryption and tighter access control.
Claims, billing & coding workflows	Label-led: Claims submissions, billing records, coding sheets, reimbursement files, payor correspondence	CONFIDENTIAL \ ALL EMPLOYEES	Start with content labeling and default labels, then add contextual rules later if needed.
Clinical records, PHI & regulated health data	Built-in: Patient records, treatment plans, discharge summaries, adverse-event reports, regulatory filings	HIGHLY CONFIDENTIAL \ ALL EMPLOYEES	Apply encryption and watermarking, with tightly scoped permissions for clinical, compliance, and legal teams.
Payor, vendor & pharmacy partner exchange	Label-led: Provider-payor contracts, formulary updates, vendor agreements, pharmacy coordination, audit packs	CONFIDENTIAL \ SPECIFIC PEOPLE	Controlled external sharing with trusted externals; auto-expiring links.
Published patient education & community materials	Published health guides, approved community resources, public wellness content, facility brochures	PUBLIC	Keep external-ready content easy to share and clearly separated.
Internal operations & team coordination	Label-led: Meeting notes, internal project briefs, team SOPs, non-sensitive operational comms	GENERAL	Apply as the default email label; keep routine internal content lightly marked and easy to find.
EHR-integrated clinical & billing workflows	Label-led: EHR data feeds, billing system exports, clinical-system reports where encryption causes downstream breakage	CONFIDENTIAL \ INTERNAL EXCEPTION	Use only when encryption blocks a critical LOB workflow; document the exception and review quarterly.
Clinical compliance & regulatory reporting workflows	Label-led: Compliance-platform records, regulatory-reporting feeds, or safety-system exports where HC encryption breaks critical tooling	HIGHLY CONFIDENTIAL \ INTERNAL EXCEPTION	Exception path only; marking without encryption. Requires IT sign-off and quarterly justification review.
Phase 2 expansion	Custom if needed: Patient IDs, claim IDs, lab/referral identifiers, member numbers	HIGHLY CONFIDENTIAL \ SPECIFIC PEOPLE	Add custom detection or exact data match only if the patient data model requires it.

RECOMMENDED 8-LABEL DEFEND-ALIGNED MODEL FOR HEALTHCARE SMB

LABEL	HEALTHCARE EXAMPLE CONTENT	PROTECTION BASELINE
PUBLIC	Published patient education guides, approved wellness content, community health resources	No encryption; external sharing allowed
GENERAL	Internal SOPs, routine operational coordination, low-risk administrative docs	No encryption; internal marking only. Default email label.
CONFIDENTIAL \ ALL EMPLOYEES	Patient intake records, claims, billing files, referral letters, scheduling data, coding sheets	Marking + encryption; no external sharing. Default document label.
CONFIDENTIAL \ SPECIFIC PEOPLE	Payor contracts, specialist referral packs, vendor agreements, auditor diligence, lab collaboration	Named-user permissions for trusted externals; governed external sharing required.
CONFIDENTIAL \ INTERNAL EXCEPTION	LOB or legacy workflows where encryption breaks EHR integrations, billing systems, or clinical portals	Marking only; no external sharing. Exception path; requires justification.
HIGHLY CONFIDENTIAL \ ALL EMPLOYEES	Payroll, incident files, clinical records, PHI, adverse-event reports, treatment plans, regulatory filings	Strong encryption, watermark, block unmanaged sharing; no external access.
HIGHLY CONFIDENTIAL \ SPECIFIC PEOPLE	Regulator responses, legal holds, auditor diligence packs requiring trusted external access	Explicit named-user access only; auto-labeling via SITs recommended.
HIGHLY CONFIDENTIAL \ INTERNAL EXCEPTION	Critical workflows where HC encryption breaks clinical compliance or regulatory tooling	Marking only; no external sharing. Tightly controlled exception path.
